

Safety benefits of the TL2 1500

Phenix uses modern vegetal tanning techniques to add a degree of flexibility to the longer rear brim so it will flex when hit by falling objects rather than snap the firefighter's neck backwards. And because the raised crossover beams are more resilient, they also provide added protection when struck from above. It also keeps the leather from cracking – so you can expect old –fashion value as well.

Additional Comfort and Profile benefits:

Advanced comfort. Phenix gives its traditional design the same low center of gravity, reduced profile, and ergonomic correctness that make modern style Phenix helmets feel lighter, more stable, and simply comfortable. With its popular ratcheting adjustment system, the exclusive Phenix suspension liner lets you simply dial in a precise fit with the helmet on. In seconds, with one hand, you can adjust the size to accommodate a hood, SCBA mask, or just the changes that come from exertion and long periods in high temperatures. It means you'll always enjoy the advanced comfort and superior fit that has made Phenix helmets such a popular choice, in any style.

Fire Protection and cleaning methods:

Dependable protection. The tough, veg-tanned leather shell is not only resilient; it's made even tougher with a high temperature fire retardant paint specially formulated for leather products. If scraped or gouged, it will show wear, but the paint is easily touched up---and for most firefighters who appreciate leather, it just adds to the rugged patina. The flexible NOMEX stitching will withstand heavy abuse. The leather shell can be cleaned with mild dish soap and a soft cotton cloth. You can depend on your traditional leather helmet to deliver dependable protection and lasting good looks. It's strong, flexible, exceptionally fire resistant, and surprisingly lightweight. That protection only starts there. The injection molded thermoplastic inner shell, with its closed cell foam impact cap, offers such a high level of impact and thermal protection, that it can pass all the compliancy requirements for a structural helmet by itself.

Accommodations of the TL2 1500 leather helmet:

- Top grade veg-tanned leather shell
- American made brass eagle finial
